

PRF Course Reykjavik

Platelet-Rich Fibrin introduction course for enhancing the patient's regenerative response in dental surgery and post-extraction situations, lowering pain and post-surgical complications.

The course is suited for dentists performing implantology and surgery.

The course combines hands-on, knowledge sharing, lectures and inspiration enabling you to start working with PRF in your office.

The course kicks off with a practical phlebotomy training session. Don't forget to bring your dental nurse along for this part.

Besides hands-on, we have planned a lecture from a +10 year user of PRF giving you tips and tricks for how and why to use PRF.

The course is in English.

Friday 18.10.2024
